1. Goal

- Working on Software Architecture

- Class diagram

- Set up a working environment and Django initial project

2. What went well

- Work with high velocity, can complete tasks in time-box duration

- Work flexibly, teammates can quickly support others' difficulties

3. What went wrong

- Not get used to design and handle big system

- Inconsistency among allocated tasks, resulting in time expansion than planned

- Ineffective and ambiguous while transferring information among others

4. What problems and what causes the problems?

- Lack of experience

5. What can be done differently in the next sprint to improve the project

- Communicate more frequently

- Information should be transparent among team

- Research more on working domain

6. What lessons we could learn

- Better teamwork

- Manage work in tight schedule

- Commit the work earlier than planned can actually benefits a lot
